Programming the Victimization Survey
Using Ci3 Survey Authoring Software

Software

The Justice Center programmed the victimization survey using Sawtooth Technologies’ Ci3 Software. Ci3 for Windows is a questionnaire authoring software program with some survey administration capabilities. Sawtooth’s WinCati program provides the typical computer-assisted telephone interviewing (CATI) capabilities including disposition reporting and callback management. The programming contained within this syntax guide assumes that researchers are using Ci3 software for questionnaire authoring and WinCati for survey administration.1

Important Notes

1. The survey uses a 12-month reference period. Respondents are asked about incidents occurring during the 12-month period preceding the survey.
2. The survey is constructed to allow a maximum of 10 incidents. No provisions are made for respondents reporting more than 10 incidents during the reference period. However, series of incidents (defined within the programming and based on National Crime Victimization Survey definitions) count as a single victimization. In other words, respondents reporting 6 or more incidents that are similar in detail and indistinguishable from one another will be asked incident report questions for a single incident rather than 6 separate incident reports.
3. The survey is designed so that a single respondent (age 18 or older) is interviewed from each household. As programmed, the survey does not allow interviewers to interview more than once member of each household dialed.

Commands

The victimization survey was developed using Ci3 software; all commands are derived from software user’s manuals. Each question is comprised of four sections—question name, question

1 Ci3 and WinCati are products of Sawtooth Technologies. The survey was developed by the Justice Center using Sawtooth Technologies’ software platforms. Sawtooth Technologies is not responsible for the creation of the victimization survey. All opinions expressed in this report are those of the Justice Center and do not necessarily reflect the opinions of Sawtooth Technologies. Similarly, the programming is a product of the Justice Center. Sawtooth Technologies is in no way responsible for the programming, including errors and omissions within the syntax if any exist.
text, instructions, and help instructions (help instructions are required). The following example depicts a complete question syntax containing all four question elements:

Q: B10
T: 1 4 1 F: "Arial" 8
B10

"Where did this incident happen?"

Interviewer: Press F1 for subcategories

1 In respondent's home or lodging
2 Near respondent's own home
3 At, in, or near a friend's/relative's/neighbor's home
4 Commercial places
5 Parking lots/garages
6 School
7 Open areas, on street or public transportation
8 Other (specify)
9 Don't know
10 Refused

I:
Loc 9 10 1 n

If (answer=10) skipto B17c

H:
1. OWN HOME- In own dwelling, attached garage, enclosed porch, detached building on own property (e.g., shed, garage), vacation/second home, hotel/motel room respondent was staying in (including attempted illegal entry)
2. NEAR HOME- Own yard, sidewalk, driveway, carport, unenclosed porch; apartment hall, storage area, laundry room, street immediately adjacent to own home (not apt. parking lot/garage)
3. OTHER'S HOME- At or in home/other building on property, yard, sidewalk, carport, apt. hall, storage area, laundry room, street immediately adjacent to home (not apt. parking lot/garage)
4. COMMERCIAL- in restaurant, bar, nightclub, store, gas station, or other commercial establishment; in office, factory, etc.
5. PARKING LOT/GARAGES- Commercial or non-commercial lot/garage, apartment/townhouse lot/garage
6. SCHOOL- Inside school building or on school property (bus, playground, parking area)
7. OPEN AREAS- In apt. yard, park, field, playground (not school), on the street (not adjacent to own or other's home), on public transportation or in station
8. OTHER
9. DON'T KNOW
10 REFUSED

ENDHELP
This type of programming underlies all crime victimization survey questions developed using Ci3 software. Figure 1 depicts the display of the above programming code as it would appear in WinCati software (note: the question number in the upper-right corner would not be visible.

The following sections briefly describe each of the four primary components of each question’s programming—question name, question text, instructions, help. Users may make the programming more or less complex depending upon their particular needs. However, the descriptions that follow are applicable to the crime victimization survey as programmed in this project. Users are encouraged to consult Ci3 or WinCati software manuals for more information.

Figure 1: Example of a Display Screen Using Sawtooth Technologies’ Software
Each question must begin with the question name command. The question text is visible in the syntax only. The question from the Q: command will not be visible in the actual question display (Figure 1 displays the question name by using the T: command described below). The Q: command must adhere to the following format:

Q: [Question Name]

In the question above, the syntax reads: Q: B10

In this case, the question name is B10. The Ci3 program requires that all question names begin with a letter.

A system of naming conventions were adopted and used throughout the victimization survey. Given the requirement that all question names begin with a letter, the letter prefix associated with each question name holds some meaning. These conventions are as follows:

1. **SYS**. The SYS prefix (short for system variable) is not visible in the actual survey programming nor is any question beginning with SYS ever presented during interviewing. However, SYS variables are part of the SPSS file exportable by the Ci3 program. These system files include respondent ID numbers, interview length, and other variables produced by the system. A complete list of these variables is available in the accompanying codebook.

2. **SCRN**. The SCRN prefix (short for screen) is used for a number of questions at the beginning of the survey. These questions establish whether or not the number dialed is a residential telephone number and whether or not an adult resides in the household. For more information on SCRN questions, see the discussion of qualifying below.

3. **V**. The V prefix is used for questions about basic household characteristics, respondent demographics, crime screen questions, and other questions not part of any incident.

4. **CP**. Questions with the CP prefix are part of the community policing questionnaire developed by the Office of Community Oriented Policing Services. They are included near the end of the programming and will be asked toward the end of the survey.

5. **A, B, C, D, E, F, G, H, I, J**. The prefixes A through J are used to signify incident reports. The survey was constructed to allow up to 10 victimizations to be recorded. The first incident report will begin with the A prefix, the second with the B prefix, and each subsequent incident will be
lettered consecutively. Each of the incident reports is exactly the same except for the prefix. Respondents will be asked victimization questions equal to the number of incidents recorded. Consequently, interviewers might never see any questions beginning with D or beyond if no respondents report more than three victimizations. In the above example (Question B10), the question is drawn from the second victimization report (indicated by the B prefix).

**Question Text**

Whereas the question name section begins with Q:, the question text section begins with T:. The question text format begins with the T: command and continues until an I: command (discussed below) is entered. This section specifies how and where the question is to be displayed and the precise text to be displayed.

The question text command conforms to the following format:

```
T: Line Column Spacing F: "Font Name" Points
```

Thus, in the question B10 example,

```
T: 1 4 1 F: "Arial" 8
```

the question text will be displayed beginning on line 1, column 4. Figure 1 shows that the question text is not flush with the left margin but, rather, is indented to column 4. This indentation is the result of the 4 in the T: command. The second 1 in the T: command instructs the software to single space text while the “Arial” 8 directs it to present text in an 8-point Arial font. Most questions in the victimization survey follow a similar format although some modifications were made when additional space was needed.

After establishing the question text parameters, actual question text can be entered. The actual text can be entered immediately below the T: line in the syntax. This line is considered line 1 and the left most column is considered column 4 based on the parameters established on the T: line.

Question text is limited to 79 columns (spaces) per line over a maximum of 25 lines per screen. Within this space, questions, answer choices, interviewer instructions, and other comments should be specified.

In the victimization survey, the first line following the T: command is the question name. A decision was made to include the question name in question text because the name is not displayed otherwise. The only exception to this rule is for incident report questions A103a, B103a ... J103a where space limitations prohibited including the question name.
In the above example, the question, “where did this incident happen?” appears three lines below the T: command. Figure 1 shows that the question is visible on line 3 (remember, the T: command directed the software to consider the first line following the command as line 1). An instruction directing the interviewer to press F1 appears several lines below the question. Finally, the answer choices are listed. Notice that the answer choices are indented several lines. Although it appears in the syntax as if the answers are only indented approximately 3 spaces, Figure 1 shows that the answers are actually indented about 7 spaces (remember, they are manually indented 3 spaces in the syntax area plus an indentation of 4 spaces instructed by the T: command).

**Instructions**

The question text continues until an I: command is encountered. The instruction area includes a diverse array of commands including skip patterns, question types, show commands, boxes, etc. The most common commands used in the victimization survey are presented below. Once again, consult the software manual for more detailed information.

The instruction section begins on the line immediately following the question text. It should begin with I: followed by a hard return. Commands are placed on lines below the I: command.

1. **BOX.** In the victimization survey, the BOX command is used to frame instructions to the interviewer. The command draws a double lined box around any question text you choose. Consider the following example:

   Box 5 3 7 70 D

   This command places a double-line box around question text starting at line 5, column 3 and ending at line 7 column 70. The ‘D’ simply instructs the software to use a double-lined border. In the syntax for question B10, line 5 is the line immediately above the note to the interviewer while line 7 is the line immediately below the note to the interviewer. Since the T: command directs the question to be displayed beginning on column 4, the BOX command starts the double-lined box on column 3 and continues the box across to line 70.

   The double-line box is evident around interviewer instructions in Figure 1. Throughout the survey, the double-line box is used to present instructions for the interviewer.

2. **LOC.** The location command is used in questions were choices are presented to the interviewer. The command specifies where answer choices begin, the number of answer choices per column,
and the number of lines per answer. The LOC command is always used along with the SEL command (discussed below). The following is a typical LOC command:

\[ \text{Loc 9 10 1 n} \]

The answer choices for this question begin on line 9 of the question text section. There are 10 answer choices per column (the victimization survey only displays answers in a single column so this value is always equal to the total number of answer choices). Each answer choice is on a single line. Finally, the ‘n’ instructs the software to display the answers in numerical order.

3. **SEL.** Used in conjunction with the LOC command, the SEL command specifies the number of answer choices available and the number that can be selected. The following is an example of a SEL command used in the victimization survey programming:

\[ \text{Sel 10 1 1 0 on enter} \]

For this question, there are 10 answer choices. Only 1 answer choice can be selected (the first 1 specifies the minimum number of answers that may be selected while the second 1 specifies the maximum number of answers that may be selected). There are 0 exit codes for this question. The ‘on’ instructs the highlighted bar should drop to the next answer choice if one is selected. Finally, the ‘enter’ command requires the interviewer to press ENTER before the software will proceed to the next question.

4. **NUM.** The NUM specifies a question type. Whereas the LOC and SEL commands together produce a question containing a list of answers from which the interviewer selects one or more depending upon the instructions. The NUM command produces a question requiring interviewers to key in some numeric value. The NUM command is never used with the LOC or SEL commands. The NUM command is used throughout the survey in questions such related to zip code, number of days missed from work, dollar amount of vandalism damage, and so on. The following is an example of a NUM command:

\[ \text{NUM 0 9999999 8 0 12 25} \]

This command, taken from question A146, instructs the software to accept a interviewer-keyed value between 0 and 9999999. The visible width is 8 (when using the Arial font, the entire keyed value was not visible; thus, the width is always one digit more than the maximum value). There are 0 decimal places. Finally, the text is keyed in and displayed beginning on line 12, column 25.
5. **OPN.** The OPN command specifies a third question type used throughout the survey. The command provides space for open-ended responses. The OPN command is never used in the same question as the SEL, LOC, or NUM commands. Each victimization loop (prefixes A through J) contains four open-ended questions (#8a, #159a, #160a, #Rev where # is replaced by the appropriate question prefix). The OPN command looks as follows:

```
Opn 11 6 24 70 Mixed
```

In this example, open-ended responses are typed in space beginning on line 11, column 6 and ending on line 24, column 70. The ‘mixed’ element of the command instructs the software to accept and display open-ended responses as both upper and lower-case text.

Questions containing the OPN command are unable to be exported in an SPSS format. Instead, they are exported the Ci3 software program as part of a separate text file.

6. **OTHER.** The OTHER command is used in conjunction with the LOC and SEL command and must be placed below the LOC command and above the SEL command. The OTHER command is used throughout the survey in questions directing the interviewer to specify. For example, question B10 asks respondents to indicate where the incident occurred. The question instructions use the LOC and SEL commands to specify that there are 10 possible answer choices to the question from which the interviewer must mark 1. Answer choice 8 (Other) and instructs the interviewer to specify the ‘other’. The OTHER command would present a text box to specify whenever answer choice 8 is selected. For example:

```
Other 8 7 9 24 70 Mixed
```

This OTHER command instructs the software to present a text-box if answer choice 8 is selected. The box would begin on line 7, column 9 and end on line 24, column 70. Once again, the ‘mixed’ allows both upper- and lower-case characters to be entered and displayed.

Although a text-box is presented, a numeric answer is still recorded. In the example above, the SPSS file would still show that answer choice 8 was selected. However, the text entered in the text-box would not be included in the SPSS file. Instead, it would be included in a separate text file exported by Ci3.

7. **IF.** IF statements are used throughout the crime victimization survey. In fact, many of the IF instructions become very complex (e.g., question A102). Consider the following instruction:
If (answer = 1) skipto B10a

The ‘ans’ or ‘answer’ in the parentheses refers to the answer to the question containing the ‘ans’ command. Thus, if answer choice 1 in question B10 is selected, the software will skip to question B10a. As evident throughout the survey programming, multiple IF commands are used in many questions. Each begins on its own line in the instruction section.

8. SHOW. The SHOW command displays variable text or text based on previous answers. For example:

    If (sysmonth=1) show "January," 6 12 8
    If (sysmonth=2) show "February," 6 12 8
    If (sysmonth=3) show "March," 6 12 8
    If (sysmonth=4) show "April," 6 12 8
    If (sysmonth=5) show "May," 6 12 8
    If (sysmonth=6) show "June," 6 12 8
    If (sysmonth=7) show "July," 6 12 8
    If (sysmonth=8) show "August," 6 12 8
    If (sysmonth=9) show "September," 6 12 10
    If (sysmonth=10) show "October," 6 12 8
    If (sysmonth=11) show "November," 6 12 8
    If (sysmonth=12) show "December," 6 12 8
    curyr=(sysyear-1)
    Show curyr 6 25 4

This command is used to bound the survey. The question text asks respondents to think about the past year. The command above provides additional clarification by displaying the current month plus the current year minus 1. In other words, if the interview was taking place in March of 2002, the question text would ask respondents to think about incidents occurring over the last 12 months, that is since March 2001.

In this example, the SHOW command is used with the IF command. The ‘sysmonth’ element represents the computer system’s month. Thus, if sysmonth=1, January is displayed on line 6, column 12. The displayed text takes up 8 spaces (or columns). The command is repeated for each of the 12 months. Since ‘sysmont’ can only assume 1 of 12 values, only one month will be displayed in the question text.

At the bottom of this grouping of commands is the ‘curyr’ element. This command instructs the software to create a new temporary variable called ‘curyr’ equal to the ‘sysyear’ (the current year as established by the computer’s date) minus one year. Thus, it ‘sysyear’ equals 2002, ‘curyr’ equals 2001. Finally, the ‘curyr’ variable is displayed on line 6, column 25, with a width of 4 spaces.
9. **H.** The H: command delineates the instruction section from the help section. As used here, the help section provides interviewers with assistance on questions that span multiple screens. Ci3 software limits the number of lines of question text (including response categories) that can appear on a single computer screen. In most cases, the 25 lines of text allowed is sufficient but, in others, the limit imposes a severe restriction.

A solution was developed to overcome this limitation. To illustrate the solution, consider the National Crime Victimization Survey’s incident report question 10. The question asks, “where did this incident happen?” There are 23 possible answer choices to this question organized under eight broad headings. The 25-line restriction prohibits presenting the question on one screen since the question, spaces, and answer choices exceed the maximum limit.

Instead of presenting the responses on one screen, only the headings were presented. Thus, when asked where the incident occurred, the respondent would give an answer that had to be situated within one of the eight headings (in respondent’s home or lodging; near own home; at, in, or near a friend’s/relative’s/neighbor’s home; commercial places; parking lots/garages; school; open areas, on street or public transportation; other).

Depending upon the answer(s) provided, the interviewer would be taken to screens where detailed information could be provided. If the respondent indicated that the incident occurred near his/her own home, a question would appear prompting the interviewer to find out if the incident occurred in own dwelling, attached garage, etc.

However, the respondent might simply indicate in the initial question that the incident occurred in his/her garage. Since, in the initial question, only the broad headings are provided, the interviewer may be unsure which category to mark. If the wrong category is marked, the follow-up question will not contain an answer choice about a garage. The respondent is, however, able to press F1. Doing so displays more detail about each of the broad category headings. The interviewer will then be able to see which of the categories to mark in the initial questions.

The F1 help screen only appears on certain questions (each is clearly indicated in the question text). Moreover, a command must be assigned specifying the help command key. Such a command is indicated at the beginning of the survey syntax (HELP F1).
Qualifying Instructions

Qualifying instruction must be included in every survey in order to administer it using WinCati software. The qualifying instruction tells WinCati that the number dialed represents an eligible household. For the purposes of the victimization survey, two eligibility criteria were established for inclusion in the victimization study.

- The number dialed must be a residential telephone number (asked in question Scrn2). If a dialed number is not a residential telephone number, the interviewer is directed to question Scrn2a and instructed to read the non-qualifying statement. The survey is terminated at this point and no data are recorded.
- At least one individual in the household must be age 18 or older (asked in question Scrn3). If no household members are 18 or older, the interviewer is directed to question Scrn3a and is instructed to read the non-qualifying statement.

Both criteria are satisfied if the respondent’s answer to question Scrn3 (number of adults in household) is greater than 0. This may seem to satisfy the second criteria only while neglecting the first. However, calls to non-residential numbers would be terminated before ever reaching question Scrn3. Thus, it is safe to say that both eligibility criteria are met if the respondent indicates that there is at least one household member age 18 or older.

The eligibility criteria must be set in WinCati as well. To do so, follow these simple instructions:

1. From the study window, click ‘specs’ in the setup box.
2. Choose new, select, or edit depending upon whether specifications were previously established.
3. Click on the quotas tab.
4. Enter the target number of respondents in the total quota space.
5. In the regular cell box, type Scrn3. This tells WinCati that the qualifying instruction is in question Scrn3.
6. In the definition box, type Scrn3>0. This tell WinCati that a household qualifies for inclusion if the answer to Scrn3 (number of adults in household) is greater than 0.
7. Click Save.

It is important to note that non-qualifying respondents will not be included in any data set exported by WinCati or Ci3. Moreover, the interview will automatically terminate if it is determined that a household does not qualify and an appropriate disposition (no adults 18+ in household, Business/gov’t/other non-residential) will be assigned.
Disposition Codes

Disposition codes represent outcomes of each telephone dial (e.g., complete, no answer, refused). The researcher must assign disposition codes for each study. The exact codes used are entirely up to the individual researcher; however, the survey programming references three specific disposition codes.

- Question Scrn2a (non-residential telephone number statement) includes the dispos = 22 command. In the Justice Center study, 22 was the disposition code for business, government, or other non-residential number.
- Question Scrn3a (no adults in household statement) includes the dispos = 23 instruction. In the Justice Center study, 23 was the disposition code for no adults 18 or older.
- Question CPEnd (end of survey statement) includes the dispos = 1 instruction. In the Justice Center study, 1 was the disposition code for completed interviews.

It is important to note that any disposition codes may be assigned but the user must be aware that the codes should correspond with the disposition instructions included in the survey programming or should be changed to correspond to the new codes.

A complete list of disposition codes used by the Justice Center is as follows:

1  Complete
2  Terminated -- no callback
3  Terminated -- callback
4  Callback arranged
5  No answer
6  Busy
7  Non-normal (fast) busy
8  No ring
9  Temp. disconnected
10 Temp. not in service
11 Answering machine
12 Disconnected
13 Not in service
14 Changed number
15 Pager/beeper
16 Non-working number
17 Refused
18 Language problem
19 Hearing problem
20 Cell/car phone
21 Pay phone
22 Business/gov’t/other non-residential
23 No adults 18+
24 Misc
25 Fax machine

The ‘final’ property was assigned to all codes except 3, 4, 5, 6, and 11. The final code indicates that the disposition is a final disposition and the number should not appear again.
